Energy Saving Pros is an established PV (Photovoltaic/ Solar) developer and installer based in N. California. We provide turn-key solutions for residential, commercial, agricultural, industrial, and educational clients.

OUR MISSION:

To deliver wholesale solar pricing to large and small energy users helping them save Big money by going GREEN.

We are Solar experts. Recent large scale projects include a 2.1 mW project with the Placer Union High School Distrit ($16M savings over 25 years) and a 1 mW project with the Loomis Union School District ($6M savings over 20 years). From large Ag projects, to large commercial, Energy Saving Pro's offers exceptional experience for all roof types, ground mounts, and carport applications.

"Energy Saving Pros understands the importance of every educational dollar and has worked hard to help ensure more of those dollars go into the classroom, not the utility bill."

Jay Stewart,
Asst. Superintendant
Loomis Union Elementary School District

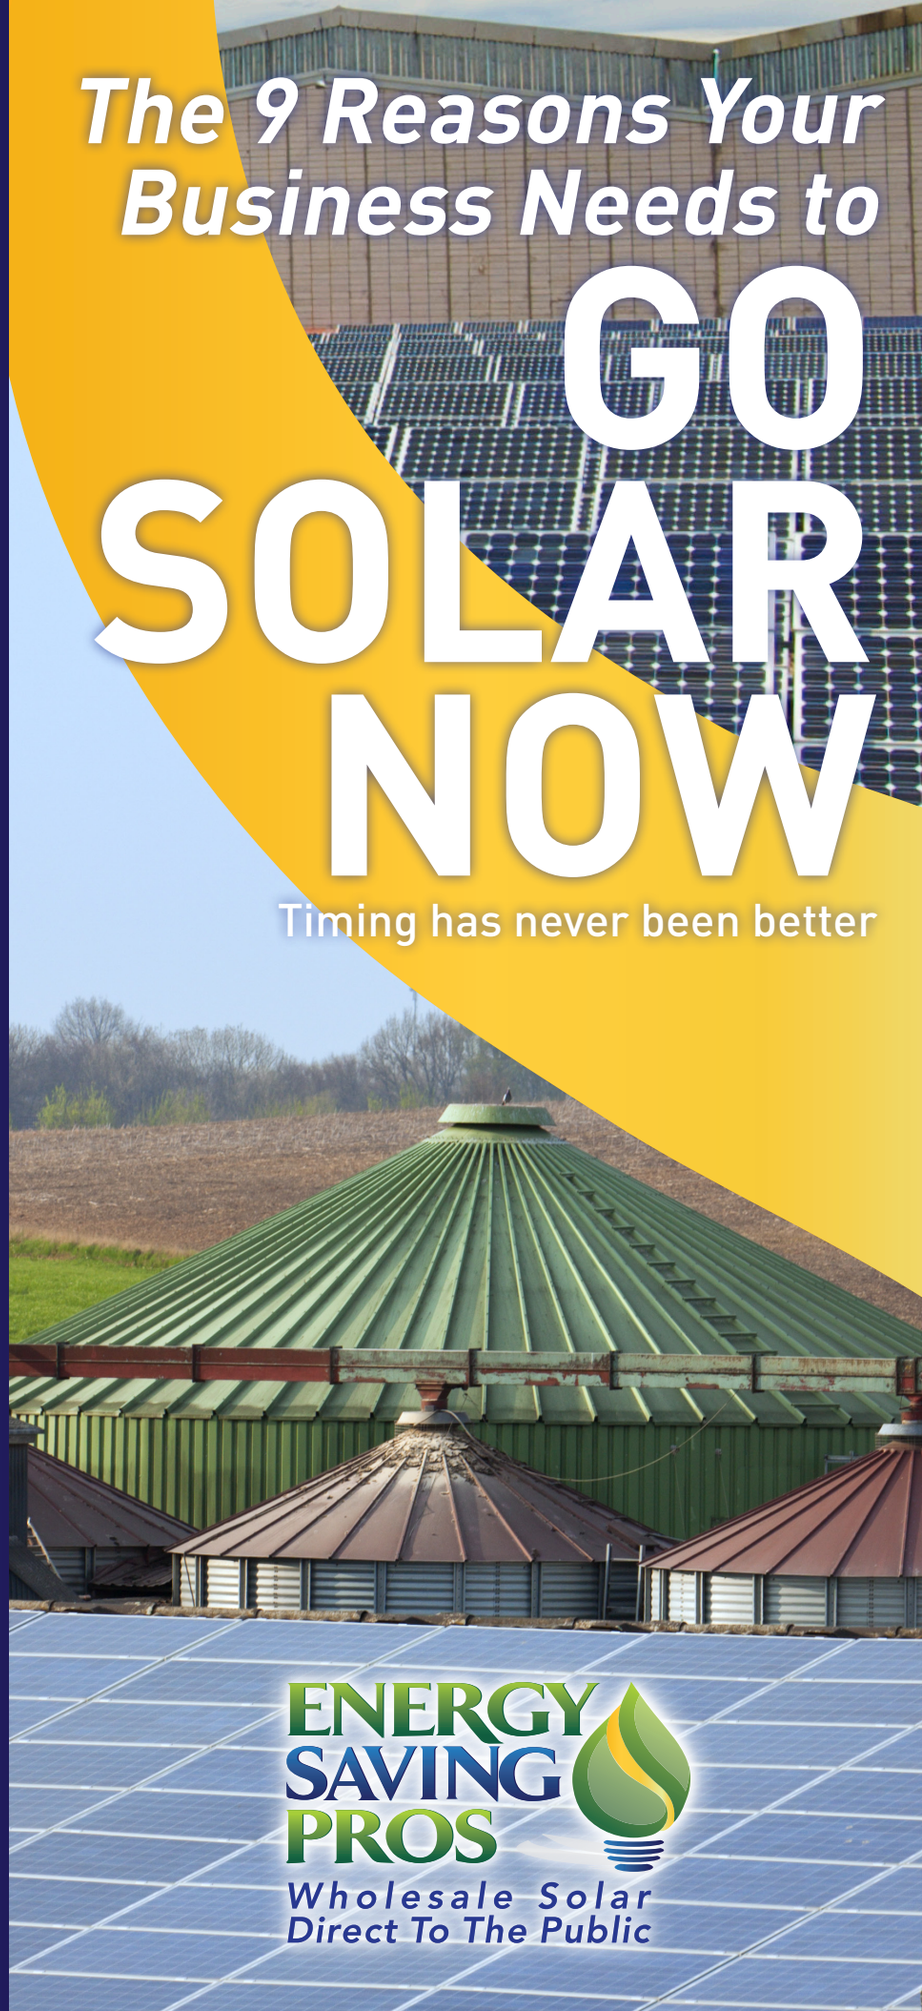
The 9 Reasons Your Business Needs to GO SOLAR NOW

Timing has never been better



ENERGY SAVING PROS
Wholesale Solar
Direct To The Public

1 IMPROVES CASH FLOWS

Turn on your savings and improve your cash flow. With Solar you can be cash-flow positive immediately. For less than you've been paying your utility, you could be producing pure, clean, green, renewable SOLAR energy.

2 ADDS VALUE TO YOUR BUSINESS

Adding Solar to your business significantly increases its value and adds an asset to your balance sheet. However, unlike adding additional buildings, Solar does not increase your property taxes.

3 LOCKS IN YOUR COST OF ENERGY

Eliminate those monthly surprises. On average, California electric rates have increased 5.5% every year since 1971. PG&E has already been approved for rate increases of 22% over the next three years. Plus, the California Public Utilities Commission(CPUC) just approved another $2.1 Billion in additional rate increases (not part of the 22%). Lock in your electricity rates now and save immediately. Let solar protect your business against ongoing rate inflation.

4 30% FEDERAL TAX CREDIT

Now through 2016 you're eligible to take advantage of a 30% Federal Tax Credit. Don't wait, the Federal Tax Credit WILL EXPIRE in 2016 and will no longer be available.

5 ACCELERATED DEPRECIATION

As a business, you can depreciate 85% of the Solar purchase price over six years. The depreciation is front loaded with the majority of the savings in the first three years.

6 SOLAR PAYS FOR ITSELF

Your SOLAR system is GUARANTEED to pay for itself with the tax and electric savings. You'll be producing pure, clean, green energy for the next 30+ years. We've had many Agricultural, Commercial, and Municiple clients whose savings are frankly astounding, and often times less than a 3-4 year break even.

7 SOLAR PRICES WILL BE INCREASING

Solar prices have bottomed out and are going up. The diminished supply of panels and increasing material costs are resulting in pricing increases.

8 ZERO DOWN FINANCING

Financing is available with numerous zero down options. We're experts when it comes to financing your Solar project; from a straight purchase, to a long term lease or a Power Purchase Agreement. Our streamlined financing process can help your Ag, Commercial, Education, Industrial, or Municipal project return cash flow immediately.

9 SOLAR IS SOCIALLY & ENVIRONMENTALLY RESPONSIBLE

As a Solar producer, you would be doing your part to reduce harmful CO-2 gasses created by non-green electrical production. Your use of Solar would help diminish our dependency on fossil fuels. Many businesses are able to capitalize on the positive press and increased good will associated with going Green.
